

AQUAELITE

TECHNOLOGY, DESIGN AND MADE IN ITALY

AQUAELITE is an Italian company specialized in the design and production of innovative shower systems with refined aesthetics. Strongly rooted in its territory, the company embraces Made in Italy as its mission, standing out for the selection of high-quality raw materials and excellence in manufacturing. Aquaelite collections represent the perfect balance between cutting-edge technology, sustainability, functionality, premium materials, and a clean, sophisticated aesthetic.

The company's catalogue offers ideal solutions for every bathroom environment, from residential spaces to hotels, spas and yachts. Thanks to a wide range of finishes, from classic tones to more contemporary ones, each product is fully customizable to meet the most refined requirements.

Clean shapes, authentic materials and total water control define a personal, everyday and tangible idea of well-being.

Each collection is born from a clear vision: combining technique and emotion, material and lightness, detail and intention.

TECHNOLOGY

Advanced machinery and highly qualified staff make every product a precise and aesthetically refined element, while maintaining the production flexibility needed to respond to market demands.

DESIGN

Our products are the result of aesthetic research and personal passion. We do not simply design: each collection represents our interpretation of the exclusive shower ritual.

MADE IN ITALY

We are proudly Italian. This identity is reflected in every product, from raw material selection to manufacturing excellence, from original design to our heritage of experience.

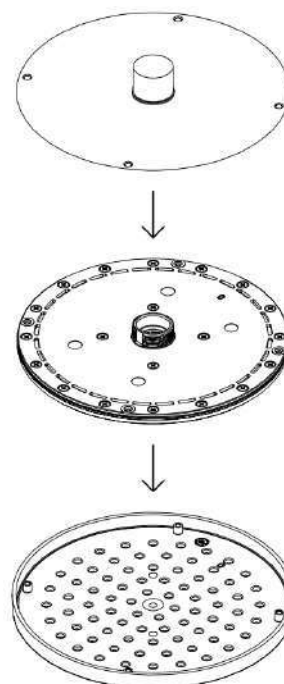

AQUAELITE

TAILOR MADE

Our designers transform ideas and insights into custom solutions, perfectly tailored to create a personalized shower environment.

Shower heads with inspectable cartridge

At AQUAELITE, we design our shower heads with a unique cartridge system, which is the result of years of experience in the production of Made in Italy shower systems. The research carried out by our AQUAELITE LAB technicians has created a functional element, the cartridge, which guarantees several advantages in terms of user comfort, water savings and product durability. The cartridge is used as the heart and central element around which all our shower heads are built. They are made of ABS, stainless steel and brass, in numerous versions for wall mounting and recessed installation in false ceilings.

Inspectable cartridge

1. **Acqua ring- Channeled water distribution**

Features: Optimizes performance with limited water consumption, improves operation in low-pressure installations, ensures uniform spray without pressure variations across the showerhead.

Benefits: Allows the use of flow limiters to reduce waste, enables installation of larger showerheads, eliminates stronger flow under the water inlet point and perimeter dripping, allows the user to dry inside the shower enclosure, which remains warmer than the rest of the bathroom.

2. **Anti drop - Anti-drip suction system**

Features: Ensures immediate water stop when the tap is closed, eliminating shower dripping.

Benefits: The user can remain inside the shower enclosure to dry off in a warmer environment than the rest of the bathroom.

3. **Anti-limescale** – Rubber plate with conical nozzles

Features: The special anti-limescale nozzle shape moves limescale deposits outside the cartridge, allowing easier cleaning. Replaceable cartridges.

Benefits: Extends product lifespan and simplifies showerhead maintenance.

COLLECTIONS

Aquaelite collections are designed to shape an intimate and conscious space – a bathroom that speaks about you. Each one interprets a different way of experiencing water: more architectural, softer, more technical or more sensorial. Lines, materials and proportions change, but the experience remains the same: intimate, essential and refined.

Aqua Blue Sound

A 360° sound experience engaging all senses. 150 watts of power with universal Bluetooth connection to enjoy your favorite music even in the shower.

Club

A design extending from wall to ceiling, creating parallel planes to integrate water functions and shape the shower space.

Halo

Light and design transform showerheads into three-dimensional elements. LED neon frames highlight the product on wall and ceiling.

INstile

A modern take on classic style. An Art Déco collection entirely made of brass with refined finishes and timeless luxury.

AQUAELITE

Kino

Compact shapes with complete functionality. The tubular showerhead delivers a body-enveloping flow combining comfort and innovation.

Metal 316

Made of AISI 316L stainless steel, known for resistance, sustainability, hygiene and superior aesthetic quality.

Minimal

Slim and contemporary, expressing Aquaelite's excellence in technology and design with ultra-thin profiles and LED lighting.

Modula

Illuminated niches where water is suspended, creating a multisensory shower atmosphere.

Neon

Delicate micro jets and diffused LED light. Clean design without visible screws for elegant surfaces.

Ninfea

Designed by Alessandro Canepa, it transforms the shower into a natural ritual inspired by the water lily.

Pop

Round shapes in multiple variations, offering versatile and timeless solutions.

Push Me

Mechanical push-button system that eliminates handles for essential design and freedom of movement.

Rock

Strength and character with rain, waterfall and mist functions for complete well-being.

Spa Home

Thermostatic mixer with touchscreen diverter, four jet programs, chromotherapy and Bluetooth audio for a full sensory experience.

Swing

Harmonious design combining color patterns for a distinctive aesthetic.

Techno

Sharp lines and smooth surfaces blending aesthetic rigor with the natural flow of water.

AQUAELITE

AQUAELITE

Wow

Digital thermostatic system with touchscreen and electronic diverter for precise control of temperature and water functions.

Aquaelite designs atmospheres, not just objects. Each element is created to integrate harmoniously with space and transform the shower into an authentic, personal and refined experience. Technology, aesthetics and functionality merge in a silent balance that speaks directly to the senses.

Designed to leave a trace

Aquaelite introduces a new vision of water design, evolving from its “Designed to feel” principle. If design conceived to be perceived through body and senses defines the experience, “Designed to leave a trace” represents its natural evolution: what you feel becomes part of everyday life and leaves a mark on the way living spaces are experienced.

Evolution 2026

Aquaelite strengthens its international growth through design events, experiential showrooms and innovative shower solutions. In 2026 the brand takes part in Salone del Mobile.Milano and opens the new “Ipunto0” showroom in the Brera Design District.

During the exhibition Aquaelite presents the “Designed to leave a trace” concept and the new compact showerhead Pocket.

Pocket, designed by Bruna Rapisarda, is conceived for contemporary living. The project originates from the need to simplify shower systems, which have become increasingly complex and bulky. With compact dimensions of 40×40 cm, it integrates two essential functions: rain spray and LED lighting. Its minimal design makes it ideal for real bathroom spaces and

clean architectural settings. Pocket introduces the “Everyday Elite” concept, redefining luxury as accessible quality in everyday life.

The company is also expanding its Live Experience Showroom network, currently 16 worldwide, with new openings planned in Mumbai and Dubai.

AQUAELITE

Timeless solutions born from research, innovation and high-quality materials.
